AGI BINMANAGER[®]

AGI SURETRACK[™]

INTELLIFARMS[™]

Designed to Deliver Simplicity

Easy on-site access without an internet connection. While at your bin site, get live temperature and moisture readings using the IntelliFarms™ Bluetooth® app on your smartphone. The data is shown in easy-to-read tables, helping you decide when to run the fans and heaters to keep your grain in condition. Read up to eight cables per bin and sync multiple bins with AGI BinCheck® on the app.

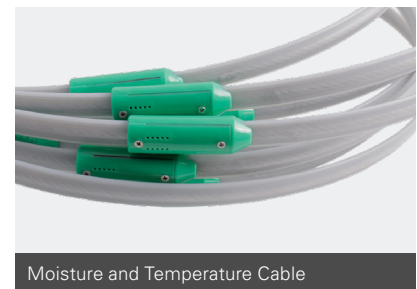

Bluetooth Connection

Using Bluetooth and a smart device, easily connect to the digital platform through the IntelliFarms app to assess multiple on-site bins for a real-time view of how your grain is performing.

Easy Installation

From cables to connection, the AGI BinCheck is quick and simple to install. A certified installer will install your cables, internally or externally, based on manufacturer guidelines. All AGI BinCheck hardware is locally mounted to communicate the readings from the bin. Once hardware is in place, simply download the app to your Bluetooth enabled phone or tablet to easily access your bin management data.

HARDWARE

Bin performance at your fingertips

Benefits

Safety

No need to climb the bins, data is captured and reported when you connect.

Visibility

Get the vital data you need when you connect with your Bluetooth device.

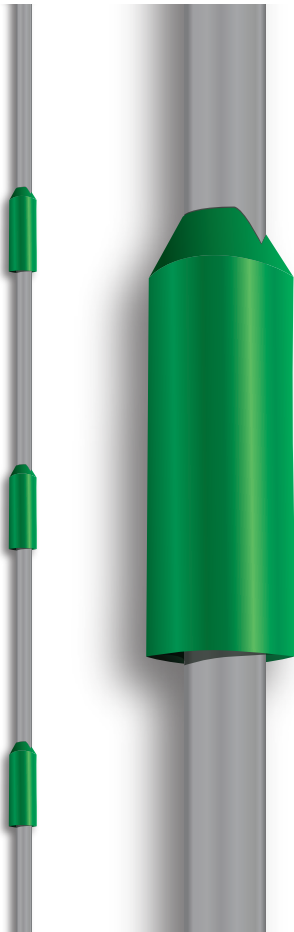

Preserve quality

A proven system to achieve target moisture levels, while preserving protein, oil and starch contents.

Profitability

Keep your grain in peak condition and run your equipment more efficiently to maximize your profits.

Features

Zero-Entry Grain Bin Monitoring

Never compromise safety with AGI BinCheck. The easy to use system keeps your grain in condition while keeping you out of your bin by managing the moisture and temperature changes that create bridges, grain walls and spoilage.

Multi-Function Sensors

Under the correct moisture levels, higher stored-grain temperatures don't present a problem. However, high stored-grain temperatures combined with high moisture content spells disaster. AGI BinCheck offers temperature readings, on all 3G cable sensors—providing you with the information needed to make the data-driven decisions that separate the black ink from the red ink and maximize your grain storage profitability.

24/7 Support

AGI customer service coaches are trained and ready to help you understand and operate your AGI BinCheck equipment. Experience less downtime when you know you can count on a responsive support team.

Two Year Warranty

AGI BinCheck hardware is warranted to be free from defects in materials and workmanship under normal application, installation, use and service conditions for a period of two years, to keep your facility running smoothly.

AGI is a global leader in supplying farm and commercial customers with the manufacturing, planning, and engineering of full equipment solutions for grain, seed, fertilizer, feed, and food. AGI's expertise enables the storage, blending, mixing, conveying, conditioning, processing, and protection of agricultural products and inputs worldwide.

Your safety is our highest priority.

Please read and understand the operator's manual and safety decals before using. Use and maintain products properly, and do not modify. Keep guards in place when operating and follow all product manuals and safety decals. For all AGI products, if guards, safety decals, or manuals are damaged or missing, contact your AGI sales or dealer representative for replacements. Images and information contained in this brochure are presented for general information.
