

AGI BINMANAGER®

MAXIMIZE PROFIT

Keep your grain in peak condition to ensure you capture maximum profit.

INCREASE EFFICIENCY

Run fans, dryers and heaters only when productive air is present; save on runtime costs.

PRESERVE QUALITY

Proven to achieve target moisture levels, and preserve protein, oil and starch contents.

MONITOR 24/7

No more worrying about what is going on in your bins; the system sends alerts directly to you when there is a problem.

INCREASE SAFETY

No need to climb the bin at any time; data is captured and reported directly to you.

GREATER PROFIT WITH CONDITIONED WHEAT

Increase profits with well-conditioned wheat that meets precise moisture targets. Ensure your wheat is always delivered in peak condition.

It's not enough to just fill your grain bins; you invest too much in your wheat crop to run the risk of over-drying or spoilage. AGI BinManager is the industry-leading grain bin management solution to preserve and condition your investment until you are ready to sell.

AGI BinManager dries and cools to your targets with precision. It measures moisture and temperature throughout the bin and analyzes the data against the conditions of outside air and air in the plenum. Based on the data captured, the system runs only when productive air is present - saving on runtime expenses and conditioning wheat to capture premiums.

24-HOUR CUSTOMER SERVICE

We are an extension of your farm, here to help you at every turn. Dedicated customer support representatives are available to help make increased value and profit a reality of your operation.

We provide:

- On-site consultation and support
- 24/7 customer support by phone
- Customized solutions to meet the needs of your commodity and your operation
- Safe, secure AGI SureTrack™ account, customized to your operation

WORKING TO INCREASE THE VALUE AND PROFITS OF YOUR FARM

AGI BinManager, AGI SureTrack, IntelliFarms, AGI and the rolling hills logo are trademarks of Ag Growth International Inc.

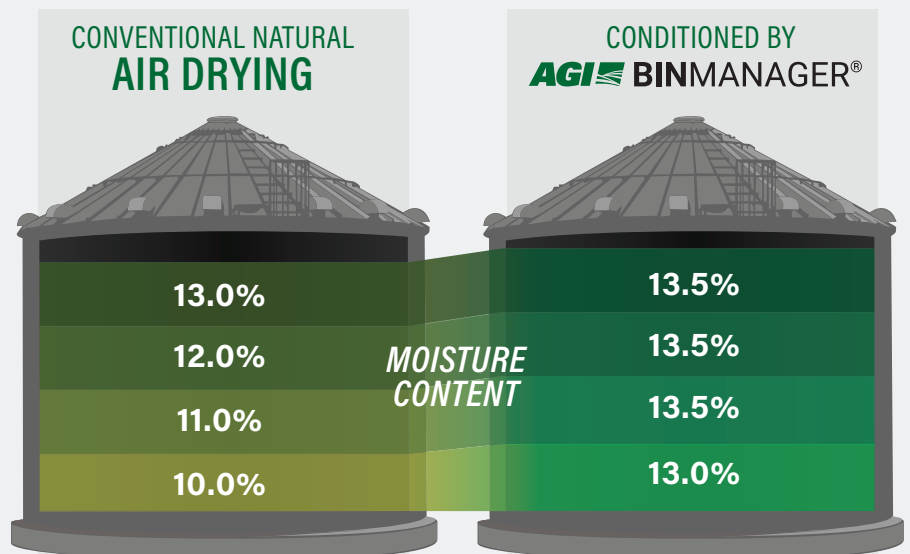

Minimize loss & energy costs

Over-drying and spoilage in your bin can eat away at your bottom line. On top of that, high energy bills from inefficient running of fans adds to the expense. AGI BinManager's controlled natural air drying technology dries wheat to targeted moisture content with precision, and only calls for the bin's fans and heaters to run when productive air is present.

CASE STUDY: WHEAT

MOISTURE CONTENT: Harvested 16% / Target 13.5%

\$4,830 OVER-DRIED LOSS

\$4,358 FAN RUN COST

\$9,188 TOTAL COST

\$2,178 FAN RUN COST

\$2,178 TOTAL COST

5 YEAR TOTAL SAVINGS

\$35,045

Bin Size:

48' diameter; 8 ring wide bin; Capacity: 42,000 bu
Two 20hp Centrifugal fans

Calculated using \$6.60 wheat market price and AGI BinManager investment is removed from profit to form ROI
